CONTACT

ABOUT MDT.

As an innovative medium-sized German company with offices on three continents, MDT today has a worldwide presence with its sunshade systems, membrane constructions and custom-made products worldwide. Company-owned welding robots, automated production lines and pre-cut machines guarantee the highest level of quality. More than 20.000 m² production and warehouse space enable us to fulfill urgent delivery requests at short notice. From its origins as a traditional wood processing manufacture, Müller-Design-Technik has evolved into a high-tech industrial company. Pioneering innovations like the MDT tulip umbrella construction in 1996 lead to MDT becoming one of a few specialists worldwide with a comprehensive product range for unit and serial production of giant umbrellas.

SUN PROTECTION SYSTEMS AND TEXTILE OUTDOOR ARCHITECTURE

MDT designs and produces both innovative and also familiar outdoor living areas. Taken beyond its basic function, the topic of sun protection opens up whole new horizons, once time is devoted to consider requirements and possibilities. New approaches and ideas on social interchange and communication, be it in a private or public and cultural catering sphere are opened. Coverage and rain protection systems in public areas frequently furnish platforms for outdoor advertising, and it is here that we achieve a new significance. Beyond the protective function, a new ambient mood can be created with lighting, creativity and design, not to mention many additional functions. MDT is committed to shaping new outdoor recreational areas that, on the one hand increase urban quality of life and on the other, offer new platforms for significant branding.

A separate competence team assures the continuous further development of the existing products and innovations. We provide innovative product concepts for design and commercial outdoor presentation, be it for private, architectural, cultural, catering or industrial use. The MDT service also includes advice on product types, features and special designs through to a top quality execution, assembly and followup service.

A major product evolution by MDT is its inverted sunshade, aptly named the tulip. It forms a truly striking focal point, especially after dusk and at night for a more beautiful or mood accentuating illumination. Tulip sunshades can make an effective backdrop to events, cultural occasions and private functions. Its design permits multiple option layering: e.g. individual design and printing, inside-outside printing, aroma/ scent emission for promotions, free choice of a variety of sizes. The company specializes in the construction of large sizes, based on its engineering expertise in all production processes.

Add-ons such as remote-controls, heating, cooling and sound expand the uses of our already diversified product

PHILOSOPHY

Exclusive materials and highly skilled workmanship, accurate in every detail to the type and purpose of the shade, come as standard. As such, MDT works only with weatherproof high-tech materials, with the exception of the traditional wooden sunshades, on which only weatherproof Eucalyptus wood is used, as in type H. Production is focused on the development of the company's own innovative product concepts and material techniques: a pioneering example of which is MDT-tex[®], the highly flexible, grime-resistant membrane that features an exceptionally long product life cycle. In the MDT-tex[®] 200, MDT-tex[®] 200FR (fire retardent) and MDT-tex[®] 300 versions this sophisticated membrane can be ordered for all types.

The superior standard of material is ensured by the testing and the use of new surface-technologies. Our customers, or the purpose of the shades then determine the ideal combination for optimum on-site implementation.

SERVICE

As an innovative engineering company we support our customers from the initial design up to the installation. We are specialized in the development, production, assembly and servicing of sun protection systems.

We offer personal and comprehensive advice as to which umbrella type will best suit your individual needs. Our services also include an individual umbrella positioning plan. Comprehensive service right from the beginning : our professional graphic artists will be glad to prepare an individual design and artwork for you.

Our broad spectrum of competencies enables us to quickly implement professional outdoor promotions as well as special solutions for our customers worldwide.
